

Division of Geochemistry American Chemical Society

What's HOT?

Geochemistry Division programming stems primarily from the members of the Division. Tell us what subjects/areas you feel deserve to be considered for future symposia. **We welcome all suggestions.**

Suggested Symposia Topic:

Are you willing to consider helping to organize such a symposia? Organizing Geochemistry Division symposia is not onerous. The Division's Program Chair takes care of most of the work, including all of the logistics. The primary roles of symposia organizers are:

- To define the scope of the symposia and invite key speakers to participate
- To promote the symposia and to help serve as a focal point for information relating to the symposia
- To assist the program chair to organize submitted abstracts into sessions for the presentations.

The Division contributes up to \$600 per symposium to support the organization of the symposium and we also support organizers who apply for external support, such as PRF funds, by undertaking much of the effort involved.

Most organizers find the effort involved both easily manageable and satisfying.
